

Most people don't think twice about safety when boarding an airplane. They simply buckle their seatbelts, sit back, and enjoy the ride. Although flying is the safest way to travel, there are a number of things you can do to further increase your safety while flying. Here are just a few tips:

## Fly private

It has been reported that for numerous reasons, flying on a private jet can be safer than flying on a commercial airline. For one reason, private jets are typically newer and better-maintained than commercial aircraft. They also fly fewer hours per day, which gives pilots more time to rest and stay sharp.

In addition, private jets typically have smaller passenger loads, so there is less chance of overcrowding and less need for haste during boarding and disembarking. And because private jets fly into more airports than commercial airlines, they have more flexibility to avoid bad weather.

JetMembership.com is a private air charter membership that caters to vacationers and business travelers alike. We have an excellent fleet of aircraft that we use to transport our clients. The planes are well-maintained and all pilots are highly experienced. This means that you can rest assured knowing that you are in good hands.

## Understand emergency protocols

In the extremely unlikely event of an urgent situation, it's essential to understand the emergency protocols. Make sure you're aware of the emergency exits on the plane; in the event of an evacuation, you'll want to be able to get out quickly and safely. It's also important to pay attention to the safety

briefing from the flight attendants. They will go over what to do in the event of an emergency, and it's important to know this information.

## Follow seatbelt requirements

Stay seated with your seatbelt fastened during takeoff and landing. These are the most critical times during the flight, and it's important to be as safe as possible. On a private plane, it can be tempting to move around freely throughout the cabin, but it's important to remain seated when the "fasten seatbelt" sign is on. Additionally, as an extra precaution, you should leave your seatbelt on whenever you're seated. If you have any questions about safety on the plane, don't hesitate to ask a flight attendant. They're there to help ensure that everyone has a safe and enjoyable flight.

## Do your due diligence

Although flying private can be an even safer way to fly, it's important to do your due diligence when chartering your private flight. Make sure the company you're flying with is reputable and has a good safety record. Check to see if the aircraft you'll be flying on is properly maintained and up to date on all safety inspections, and that the pilot flying your plane is experienced and has a good safety record. Make sure to ask for references and check them out thoroughly before making a decision. It is also a good idea to ask about the company's insurance coverage and what type of financial protection they offer in case of any incidents. Ask about the company's safety procedures and policies, and make sure you're comfortable with them before booking a flight. If you have any concerns about safety, don't hesitate to ask the company or pilot directly.

When you charter a flight with JetMembership.com, we assure you that we only adhere to the highest of safest standards. From the aircraft we use to the pilots we work with, safety is our number one priority .

## Reduced exposure to COVID-19 and other viruses

The COVID-19 pandemic has forced many people to rethink their travel plans. For some, this means choosing to fly private instead of commercial in order to minimize their exposure to the virus, and this is just another reason why flying private can help keep you safe.

There are a number of reasons why flying private can help reduce your risk of contracting COVID-19. First, private jets typically fly at a higher altitude than commercial airlines, which can help to reduce the spread of germs. Additionally, private jets typically have fewer passengers on board, which means that there is less opportunity for the virus to spread. Finally, private jets often have better air filtration systems than commercial airlines, which can further reduce the risk of exposure to COVID-19.

If you are considering flying private in order to minimize your exposure to COVID-19, there are a few things you should keep in mind. First, it is important to choose a reputable charter company, like JetMembership, that has experience flying during a pandemic. Additionally, be sure to ask about the health and safety measures that are being taken to protect passengers from COVID-19. Finally, make sure to follow all recommendations for how to reduce your risk of exposure to viruses, such as washing your hands often.
