

There are many benefits to flying private, but some people are surprised to learn that it can also be faster compared to flying commercial. There are a few key reasons why private flights are often faster than traditional commercial airlines, which include:

The security process is typically much faster

First, private jets do not have to deal with the same security protocols as commercial flights. This means that they can get through airport security much quicker. As anyone who has flown commercial knows, security can be a time-consuming process. From waiting in line to taking off your shoes and belts, it can all add up to significant delays.

Flying private eliminates many of these issues, as you typically have a dedicated security team and separate entrance and exit from the main terminal. This can save you valuable time, especially if you are on a tight schedule.

So, if you are looking to save time and get to your destination faster by cutting down on how much time it will take to go through security, flying private is the way to go.

Some airports offer ramp access for private flights

Ramp access at airports refers to the ability to access the airport ramp area, which is typically used for parking and servicing of aircraft.

Ramp access can be important for a number of reasons, including allowing passengers to disembark from an aircraft directly onto the ramp (rather than having to walk through the terminal building), and allowing aircraft to be serviced more quickly and efficiently. In some cases, ramp access may also be required in order to reach a particular gate or parking spot.

Many airports have designated areas for ramp access, which are typically well-marked and easy to find. In some cases, however, ramp access may be limited or restricted due to security concerns or other factors. Private flights typically have much greater flexibility when it comes to ramp access than commercial flights. This is due to the fact that private flights are not subject to the same security and other restrictions as commercial flights. As a result, private jets and other aircraft can often park in closer proximity to the terminal building, and passengers can often disembark directly onto the ramp.

Ramp access can be especially important for private flights carrying VIP or other high-profile passengers, as it can help to ensure a quick and efficient departure from the airport. In some cases, private aircraft may even have their own dedicated ramp access roads or gates.

If you are chartering a private flight and would prefer to arrive at or depart from airports with direct ramp access that allows you to drive right up to your aircraft, we can try to find the best options to make this happen. This will help to ensure that you are able to disembark from the aircraft and reach

your ground transportation quickly and without incident.

More schedule flexibility

Private planes don't have to adhere to the same schedules as commercial airlines. This means that they can take off and land at times that are more convenient for their passengers. Oftentimes, commercial flights that are scheduled during congested times can spend a significant amount of time on the runway before finally taking off. Similarly, commercial planes may be forced to go into a holding pattern if too many other planes are scheduled to land at the same airport. When you fly private, you're in control of your schedule. If you're looking to maximize your time, flying when it's less busy can be the best solution.

Speed

Private planes can travel at speeds of up to 600 miles per hour. This is significantly faster than the speed limit for commercial airlines, which is typically only 550 miles per hour. Private planes can therefore get you to your destination much quicker than a commercial airline. In addition, private planes can fly at altitudes of up to 40,000 feet, which is higher than the maximum altitude for commercial airlines. This means that you can avoid bad weather and get above any turbulence, which not only helps save time, but can give travelers a much more comfortable and enjoyable flight.

Better airport options

Private jets often have access to smaller, less congested airports than commercial flights. This can make a big difference in terms of travel time. Not only can these municipal airports be closer to your origin or destination, but they are often much less crowded, which saves a lot of time as well.

There's a better way to fly: Enroll in our JetMembership program today

If you are ready to experience a better way to fly, we are here to help. Saving time is just one of the many benefits of flying private. [Contact us today](#) to learn more about our JetMembership program and to charter a private flight!
