

If you've ever considered flying private, you've probably come across the term "empty leg flight." But what are empty leg flights? Simply put, an empty leg flight is a private jet that's already in the air and needs to fly back to its base, without any passengers on board. This often happens when a charter customer flies one-way, or when a private jet has to reposition for another charter. While empty leg flights may seem like a waste of resources, they can actually be quite beneficial for both private aviation companies and passengers. While empty leg flights can be a great way to save money on your next private jet charter, there are a few things you should keep in mind when chartering one.

Understanding more about how empty leg flights work

Let's say you're looking to fly from Los Angeles to New York City on a private jet. If there's an empty leg flight leaving from Los Angeles bound for New York City, you may be able to charter that flight for yourself (or your group) at a discounted rate. The same goes for repositioning flights. Let's say you're looking to charter a jet from Miami to Aspen for winter break. There may be an empty leg flight leaving Miami bound for Aspen. If you're flexible with your travel dates and itinerary, you may be able to get a great deal on that flight.

Of course, there are some things you should keep in mind before chartering an empty leg flight. First and foremost, since these flights are often last-minute bookings, you'll need to be flexible with your travel dates and itinerary. Secondly, since these flights are typically sold at a discount, they're often non-refundable and may have different cancellation policies than regular charter flights.

So, if you're thinking about booking an empty leg flight for your next trip, make sure you're aware of the pros and cons before making your decision.

How private aviation companies benefit from empty leg flights

For private aviation companies, empty leg flights provide a way to generate revenue from an otherwise unoccupied aircraft. In many cases, private aviation companies will sell empty leg flights at a discounted rate in order to fill up the aircraft and avoid having to fly it back empty. This can be a great way to generate some extra revenue, while also providing passengers with a cheaper way to travel.

How passengers benefit from empty leg flights

Empty leg flights can also be beneficial for passengers who are flexible with their travel plans. Since these flights are typically sold at a discount, they can be a great way to save money on a private flight charter. Additionally, empty leg flights can often be booked on short notice, which can be perfect for those who need to travel last minute.

Considerations about empty leg flights

There are some things to keep in mind before booking an empty leg flight. First, because the flight is not specifically for you, you may have to be flexible with your travel dates and times. Second, empty leg flights are often one-way only, so you'll need to make alternative arrangements for your return journey.

Despite these potential drawbacks, flying on an empty leg flight can be a great way to save money on private air travel. If you're flexible with your travel plans and don't mind making your own way back, an empty leg flight could be the perfect option for you.

Last-minute availability

Not only can empty leg flights save a considerable amount of money, but for travelers with flexibility looking to fly somewhere last minute, an [empty leg flight](#) can be the way to go.

Learn more about empty leg flights
